Proctorship Course

by ISOPES

Introduction of the ISOPES

Quality of life matter is one of the main concerns in the field of endocrine surgery.

Especially scarless neck surgery is important because thyroid cancer is the most common endocrine cancer.

“Oncoplastic” means the way to achieve best cosmetic result along with the best oncologic outcome in the management of cancers.

In this context, ISOPES is organized to achieve following objectives:

- To advance the science and art of oncoplastic endocrine surgery
- To maintain high standards in the practice and art of oncoplastic endocrine surgery
- To provide a forum for scientific presentations and discussions
- To encourage basic and clinical research in the field of oncoplastic endocrine surgery

Several efforts have been made to develop oncoplastic endocrine surgical technique.

Vigorous clinical and basic researches are mandatory to ensure evidence-based medicine.

ISOPES is first international society in oncoplastic endocrine surgery and will be the milestone to build an international cooperation and friendship.
